Bryan Daniel Quiñones Garcia

Software Developer

Phone: 809-988-4985 | Email: bryanquinonesg@gmail.com | Santo Domingo, Dominican Republic
LinkedIn: linkedin.com/in/bryanquinonesg

Professional Summary

Detail-oriented Software Developer with formal training from Instituto Tecnológico de las Américas (ITLA) and professional experience supporting digital identity and authentication systems. Proficient in multiple programming languages including C#, Python, Java, and JavaScript, with a solid foundation in relational and non-relational database management. Experienced in providing technical support, configuring software environments, and working within structured data systems to ensure secure and reliable operations. Adept at troubleshooting complex issues, communicating technical concepts to non-technical stakeholders, and contributing to team efficiency through documentation and process improvement. Passionate about building practical, scalable solutions and continuously expanding technical expertise across the full software development stack.

Work Experience

Digital Signature & Technical Support Assistant

Santo Domingo, Dominican Republic | January 2024 – Present

- Managed end-to-end digital signature workflows for a high-volume certification environment, overseeing client onboarding, identity verification, and authentication procedures in compliance with institutional security standards.
- Provided first- and second-level technical support for software installation, system configuration, and troubleshooting across multiple digital platforms, consistently resolving issues within established service timeframes.
- Administered and maintained structured data systems and internal databases, applying skills in Java, C#, and Python to automate routine data validation tasks and reduce manual processing time.
- Diagnosed and resolved authentication and digital certificate errors for clients, improving service reliability by systematically documenting recurring issues and escalating edge cases to senior technical staff.
- Developed internal documentation for common technical procedures and support workflows, enabling faster onboarding of new team members and reducing repetitive support requests.
- Coordinated directly with clients to gather technical requirements, explain system processes, and deliver solutions — strengthening client trust through clear communication and consistent follow-through.
- Monitored platform performance and flagged anomalies in digital signature processing queues, contributing to a more stable and auditable operations environment.

Projects

Library Management System

Academic Project – ITLA | 2023

- Designed and developed a full-featured library management application using C# and ASP.NET, with SQL Server as the backend database. Implemented CRUD operations, user authentication, and book inventory tracking.
- Applied Entity Framework for ORM-based data access, reducing raw SQL boilerplate and improving maintainability across the data layer.

Task Management REST API

Personal Project | 2023

- Built a RESTful API using Node.js and MongoDB to manage tasks with user authentication via JWT tokens. Documented endpoints and tested with Postman to ensure reliability across all routes.

- Containerized the application for local development and practiced version control using Git and GitHub, following a feature-branch workflow throughout the project lifecycle.

Education

Senior Technician in Software Development

Instituto Tecnológico de las Américas (ITLA) | 2022 – 2024

- Completed rigorous coursework in object-oriented programming, relational database design, web application development, and software engineering fundamentals.
- Developed multiple academic projects in C#, Java, and Python, applying design patterns, MVC architecture, and database normalization principles to real-world problem scenarios.
- Participated in Scrum-based team projects, gaining hands-on experience with Agile planning, sprint management, and collaborative development using Git and Azure DevOps.

Skills

Technical Skills

- Programming Languages: C#, Python, Java, JavaScript, HTML, CSS
- Frameworks & Libraries: .NET, ASP.NET, Entity Framework, Node.js, React Native, Flutter
- Databases: SQL Server, MySQL, MongoDB, SQLite, PL/SQL — including schema design and query optimization
- Developer Tools: Git, GitHub, GitLab, Azure DevOps, Jira, Postman
- Methodologies: Scrum / Agile — sprint planning, backlog grooming, retrospectives
- Other: Digital signature systems, PKI authentication workflows, software configuration and troubleshooting, technical documentation

Soft Skills

- Analytical thinking and structured problem-solving under pressure
- Client-facing communication — translating technical concepts into clear, accessible language
- Attention to detail and strong commitment to data accuracy and security
- Self-motivated learner with a track record of continuous skill development
- Effective team collaborator with experience in cross-functional coordination
- Reliable and responsible — consistent follow-through on tasks and deadlines
